

Implementation handoff — UI redesign

Companion to the approved mockups in *Ledger Mockups* (ids 3a–3k, 4a–4e). Scope grew beyond the original design-only brief: it now includes small schema additions (cadence, start month, payment sources). Repo: `~/_projects/expense-tracker` · Owner: Michel.

Ground rules (unchanged from Michel's brief)

- Next.js 16 App Router, React 19, server components by default; CSS Modules + tokens in `src/app/globals.css`; Base UI 1.7; Carbon icons; IBM Plex; no new dependencies without asking Michel.
- de-DE formatting (1.234,56 €), amounts always mono with tabular numerals; dotted leader lines stay.
- Category palette locked: 8 slots in `src/lib/colors.ts`, no new hues, no reordering; chart text in ink tokens; 2px gaps in stacked bars.
- A11y floor: visible `:focus-visible`, `prefers-reduced-motion` honored, `aria-label` on icon-only buttons, tap targets $\geq 24\text{px}$.
- After each task: `npm test green`, `npm run build clean`, check $\sim 390\text{px}$ and both themes.

Global design decisions

- **No due dates.** Entries carry a cadence + start month only. Sheet rows show no dates; consequently there is no overdue state and no due-date sort — rows sort by amount (desc) within their group.
- **No BEZAHLT labels.** The checked checkbox is the paid signal; a fully-settled group collapses to one line with a green check.

- **Payment source is invisible when default.** Only deviations surface, as a small mono tag (PAYPAL) on sheet rows and a PayPal suffix in the template meta line.
- **Nav active state** is a filled accent pill (mockups: every screen).
- **Sheets are still frozen** at creation; nothing here changes server actions for check-off.

Tasks

Ordered by dependency. T1–T2 are foundations; T3–T9 are independent of each other once T1–T2 land.

T1 Data model — cadence, start month, drop due day

SCHEMA · NEEDS MICHEL SIGN-OFF

- Template entries: cadence enum `monthly` | `quarterly` | `halfyearly` | `yearly`; new `startMonth` (YYYY-MM) — first month of the series, phases quarterly/half-yearly/yearly occurrences. Remove due-day.
- Update `src/lib/occurrences.ts` + its 16 tests: an entry occurs in month `M` iff $M \geq \text{startMonth}$ and $(M - \text{startMonth}) \% \text{interval} = 0$. Migrate existing entries (`startMonth` = created month; existing yearly entries keep their month).
- Existing frozen sheets are untouched by migration.

T2 Data model — payment sources („Bezahl von")

SCHEMA · NEEDS MICHEL SIGN-OFF

- New entity `payment_source` (name, `isDefault`); exactly one default, seeded „Bankkonto".
- Optional FK on template entries and one-offs; null/default means Bankkonto. Copied onto sheet items at freeze.
- Delete of a source in use: reassign its entries to the default (confirm dialog wording in T8).

T3 Nav — active pill

MOCKUPS: ALL · nav.tsx / nav.module.css

- Current route renders as a filled pill: accent background, white text, `border-radius: 99px`; inactive items stay muted text. Use `usePathname` or layout-level segment.
- Acceptance: active state visible on `/sheets`, `/sheets/[y]/[m]` (Sheets stays active), `/template`; both themes.

T4 Sheets list — year folders + create constraint

MOCKUPS: 3a 3b 3c · sheets/

- Group sheets into collapsible year boxes (same visual pattern as sheet-detail groups: bordered card, dark header row, chevron, dotted leader, „n Blätter · Summe"). Current year open, others collapsed; persist open/closed per year in `localStorage`.
- Month cards: month name, total, progress meter, „n bezahlt · n offen", green check + „abgeschlossen" at 100 % (no badge).
- Create picker (Base UI Select) offers only current month + 3 ahead; months with an existing sheet are listed disabled („existiert"). Server action validates the same rule. Helper line: „Anlegen ab dem aktuellen Monat, bis zu 3 Monate im Voraus". This replaces the native month input.
- Empty state per 3c: invitation copy, primary CTA, link to template, same create rule noted.
- Tablet $\geq \sim 700\text{px}$: month cards in a 2-column grid inside the year box (3b).

T5 Sheet detail — collapsible category groups

MOCKUPS: 3d 3e · sheets/[year]/[month]/, sheet-checklist.tsx

- Replace KPI tiles + flat checklist with: header (eyebrow, month title, + One-off, delete), overall meter with „offen von total · %" line, then one collapsible group per category (Uncategorized last, gray).
- Group header: chevron, category dot, name, open-count 0/3, dotted leader, group sum; 3px per-group meter under the header. A fully-paid group auto-collapses to a single line with a green check (animate collapse; instant under reduced motion) — this is the „settled" moment.
- Rows: checkbox (≥24px) · name · optional ONE-OFF tag · optional payment-source tag (only non-default, e.g. PAYPAL) · leader · amount · trash (one-offs only). No dates.
- Keep the stacked category bar + legend as-is on mobile below the groups; on tablet move summary card (Offen, meter, Total/Bezahl/Fortschritt) + chart card into a sticky 280px right column (3e).

T6 Template — two-line register

MOCKUPS: 3f 3g 4e · template/

- Row line 1: category dot · name · dotted leader · amount · ... actions menu (Bearbeiten/Löschen). Line 2, small muted mono, indented under the name: cadence, plus start month only if in the future („ab 01/27"), plus source only if non-default („· PayPal"). Plain monthly rows read just „monatl".
- Footer row inside double rules: „Ø / Monat" with the monthly-normalized sum (quarterly/3, half-yearly/6, yearly/12).
- Below the register: „Kategorien verwalten" row (overlapping dots, chevron) opening the category manager (T9); category chips grid is removed from the page.
- Empty state per 4e. Tablet: register left, categories side panel (name + entry count, „+ Neue Kategorie") right (3g).

T7 Entry + one-off dialogs

MOCKUPS: 3h 3i 4a · entry-dialog, adhoc-dialog

- Entry dialog fields: Name, Betrag, Ab Monat (month picker, replaces due-day), Rhythmus chips (Monatlich/Quartal/Halbjahr/Jährlich), Kategorie chips + „+ Neu" (inline-creates via T9 manager), Beahlt von chips (default pre-selected). Helper: „Erster Monat der Serie — taktet Quartal, Halbjahr & Jährlich".
- One-off dialog (4a): Name, Betrag, optional Kategorie, Beahlt von; subtitle „Gilt nur für dieses Blatt"; submit „Hinzufügen".
- Presentation: bottom sheet on mobile, centered Base UI Dialog $\geq \sim 700\text{px}$. Dialogs remount fresh per open (verify the existing fix).

T8 Confirm dialog

MOCKUP: 4b · confirm-dialog.tsx

- Centered card: bold question, body naming the item + amount in mono, „lässt sich nicht rückgängig machen", ghost Abbrechen + danger action right-aligned. Reused for: delete one-off, delete sheet, delete template entry, delete category/source (with reassignment note).

T9 Category + payment-source managers

MOCKUPS: 4c 4d · category-manager.tsx + new source-manager

- Category manager (4c): list rows (dot, name, entry count, leader, ...), inline edit expands an 8-swatch row — the locked -- cat-* slots; taken colors dimmed and disabled, selected gets a ring. „Neue Kategorie..." inline input. Max 8 categories (one per slot).
- Source manager (4d): same list pattern without colors; default row carries a STANDARD tag; „Neue Quelle..." input; footnote that the default never shows on rows. Entry point: alongside „Kategorien verwalten" on the template page.

Open items — not in these tasks

- **Light mode.** All mockups are dark; do a light-token pass per screen after T3–T9 land (handoff priority #3).
- **Check-off micro-interaction.** The settle animation beyond group auto-collapse (stamp/fade on the row) is undesigned — mock before building.
- **Skipped-cadence hint.** Whether a sheet hints at entries not due this month („Haftpflicht fällig in 02/27") — decide with Michel.
- **Quartal/Halbjahr in old sheets.** Frozen sheets predating T1 are unaffected; no backfill.

Verify

Per task: `npm run dev -- --port 3111` (password test1234), `npm test` (occurrence tests updated in T1 stay green), `npm run build clean`. Check every touched screen at ~390px and ~834px, both themes. Screenshots beat guessing.
